## Fedora Project Wiki

The Fedora Project wiki is a place for end users and developers to collaborate. You can find more information or add some yourself. Write access to the wiki is limited to those who have [Fedora accounts](#); however, it is not hard to get one! To join the wiki, [follow these instructions](#).

### What's the Fedora Project?

[\[edit\]](#)

The Fedora Project is a global partnership of free software community members. The Fedora Project is sponsored by [Red Hat](#), which invests in our [infrastructure](#) and resources to encourage collaboration and incubate innovative new technologies. Some of these technologies may later be integrated into Red Hat products. They are [developed in Fedora](#) and produced under a [free and open source license](#) from inception, so other free software communities and projects are free to study, adopt, and modify them.

Read an [overview](#) to find out what makes Fedora unique, and learn about our [core values — the foundations](#) upon which the project is built.

### What's inside Fedora?

[\[edit\]](#)

The [Fedora 10 release summary](#) covers our most recent release.

The [Release Schedule](#) gives a timeline of the next release, Fedora 11 (Leonidas). The [Feature List](#) documents the features planned for Fedora 11.

### How do I get involved?

[\[edit\]](#)

There are many ways to [contribute](#) to the Fedora distribution and the community that surrounds it. We have a large community full of talented and energetic [people](#) who enjoy meeting new contributors and helping them learn how to participate in Fedora. The list below provides links to each team and sub-project. Use it to visit a team that interests you. On the team page you can find out how to contact other community members and get involved in the Fedora community. We can't wait to meet you.

### Fedora Sub-Projects For Contributors

[\[edit\]](#)

[Fedora Packaging](#)  
Packages programs for distribution through yum

[Fedora Live CD](#)  
Produces Live CDs for easier testing and installation

[Fedora Documentation](#)  
Writes documentation for Fedora

[Fedora Ambassadors](#)  
Spreads Fedora around the globe

[Fedora Marketing](#)  
Promotes the usage and support of Fedora worldwide

[Fedora Bug Triage](#)  
Aids developers and users in fixing bugs

[Fedora Quality Assurance](#)  
Prevents and fixes bugs for a better Fedora

[Fedora Directory Server](#)  
Provides an enterprise-class LDAP server for Fedora

[Fedora Infrastructure](#)  
Provides servers, tools and utilities for the Fedora Project

[Planet Fedora](#)  
Displays blogs of Fedora contributors

[Fedora Websites](#)  
Designs and builds Fedora Project websites

[Fedora Artwork](#)  
Designs themes, icons, and other Fedora designs

[Fedora L10N](#)  
Brings everything around Fedora to local communities

[Fedora I18N](#)  
Supports the localization of Fedora

[Fedora Games](#)  
Games and fun things available with Fedora

[View All Projects...](#)

[Fedora Events](#)  
Events of the Fedora community

[Red Hat Enterprise Linux/CentOS 5 minimal installation](#)

With current virtualization technology it is often desirable to only install a minimal system and then only add the one service running on the system. Unfortunately, this is not as easy as the "Minimal Installation" of RHEL (I'm not even going to think about Fedora) is rather huge and contains lots of unnecessary gems people do not want on a server.

The easiest way of achieving a minimal installation is to use a [kickstart](#) file and select only the necessary packages.

The following kickstart file only installs a usable base system but leaves out the unnecessary stuff often being installed on a "server" installation. The %post script is used to do some final clean up. In this case 1380 packages are removed if running on a x86\_64 system in order to prevent having a mixed userland.

\* F11 Beta Release Notes \* federal10nadminminutes

1 **Fedora 11 Beta:**  
 2  
 3 When Fedora 10 was released, users and press alike gushed: "Slick and stable... has a rock solid feel  
 4 l." "Fast and easy." "A great release." What is next for the free operating system that shows of  
 5 f the best new technology of tomorrow? You can find out at:  
 6  
 7  
 8 <http://fedoraproject.org/get-prerelease>  
 9  
 10 We also hope to repeat the crazy success of Fedora 10's Beta  
 11 contest! Test five things in the Beta that are important to  
 12 you as a user. If you find a bug \*and\* report it, you get  
 13 the free attention of a package maintainer on a problem  
 14 personally important to you! Do your part to make Fedora 11 that much better.  
 15  
 16 <https://bugzilla.redhat.com/>  
 17  
 18 Among the top features of this ground-breaking release:  
 19  
 20 \* ''Desktop Environments'' - Updates to Gnome 2.26 and KDE 4.2.1 bring the latest innovations and  
 21 functionality to desktop users. Xfce and Sugar have also been updated.

Latest Comments [more]

Update	Comment	From	Karma
pam-1.0.4-4.fc10	Then it is a different problem - it seems like the file dependencies are mishandled either by the repository or by yum but it definitely is not a problem in the pam package itself. Could you download the package manually and try rpm -Uvh ... or yum localinstall ... ?	tmraz	☹
pam-1.0.4-4.fc10	I updated with 'yum -enablerepo=updates-testing update pam'. I am currently using a pure 32-bit system. I can try the update on a 64-bit system later today.	mooninite	☹
bit-0.4.90-8.fc9	This update has been submitted for stable	rvinyard	☹
ngcc-3.1.6-4.fc10	This update has been submitted for stable	rvinyard	☹
bit-0.4.90-8.fc10	This update has been submitted for stable	rvinyard	☹
conexus-0.6.0-2.fc9	This update has been submitted for stable	rvinyard	☹
conexus-0.6.0-2.fc10	This update has been submitted for stable	rvinyard	☹
conexus-0.6.0-1.fc9	This update has been submitted for stable	rvinyard	☹
pam-1.0.4-4.fc10	How did you try to update? Could it be some misconfiguration on your side? Is your system multilib - that is x86_64 arch? Note that the pam-1.0.4-4.fc10:1395 package contains the /lib/security/pam_loginuid.so file.	tmraz	☹
geany-0.16-2.fc10	open and closed program, remembered opened files and saved some C files.	mooninite	☹
